

...about us

Since 1988 **ERREBI** has been developing tailor-made solutions in field of industrial automation for the creation of machines and lines for wooden packaging. Particularly for wooden packaging producers of cases, cages, crates, flanges, saddles, non-standard pallets, fences and more.

The competence of our technical service makes possible to use our technologies inside industrial plants in many regions around the world.

...reviews

*"I'd choose **Errebi** again as the machine supplier for our company because after a few weeks, the **Rapid M8** machine has met all of our expectations: we manufacture more quickly, safely, with greater precision and quality. Whenever we had special requests, **Errebi** took them into consideration with extreme seriousness. That again shows that our investment went in the right direction."*

Alexander Hölzle – Hölzle Holz e. K.

*"We work with two **Errebi** machines: **Rapid** and **SM**. Both are a great help in our production of wooden packaging. Easy to handle and working for years without any problems. We can recommend these machines as well as the service provided by the company"*

Wolfgang Sirch – Sirch e. K.

...ERREBI machines' advantages

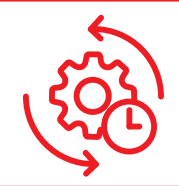

VERSATILITY AND EASE

The independent movement of the nail guns allows you to program the nailing of different products with varying heights, in the same work cycle.

HIGH PRODUCTION RATE

Streamlined production cycle thanks to the simultaneous execution of several work programs, even using different types of nails.

FORMAT CHANGE SPEED

A simple block guide and nailing head positioning system facilitates and speeds up the format change.

SAFETY

The high standard of the safety devices ensures that operators are protected both against the movement of the machine and of the nail guns.

HIGH PRECISION

Perfect alignment of boards, blocks and other components during nailing.

WE
MANUFACTURE
WOODEN
PACKAGING
MACHINERY

Our commitment

ERREBI stands out on the European and world market for the excellence in the manufacture of wooden packaging machinery and lines with high quality and versatility.

Our job is to transform our customers' challenges into opportunities to increase their competitiveness.

The purpose of our technologies is to feature sturdy design, with solid safety mechanisms, always keeping an eye on innovation, build quality and the production needs of our customers.

The operator panel allows to manage pieces production and to monitor status of work progress.

The software allows you to manage production settings from both, through the panel operator or through IP protocol from LAN network.

The independent movement of the nail guns makes it possible to make several non-standard products in the same work cycle.

...our solutions

BRIDGE

BRIDGE

The **BRIDGE** machine is ideal for those who need to manufacture products such as cases, cages, crates, flatbeds, flanges, saddles, pallets, garden wood, fences and more, in a short time.

The machines of the **BRIDGE** series are set up like a feedthrough "bridge" on several independent tables that allow to perform different nailing, boring or milling programs in the same work cycle, located at different points along the workbenches.

The system with several work tables facilitates the operator's work of loading and unloading bulky products.

RAPID

RAPID

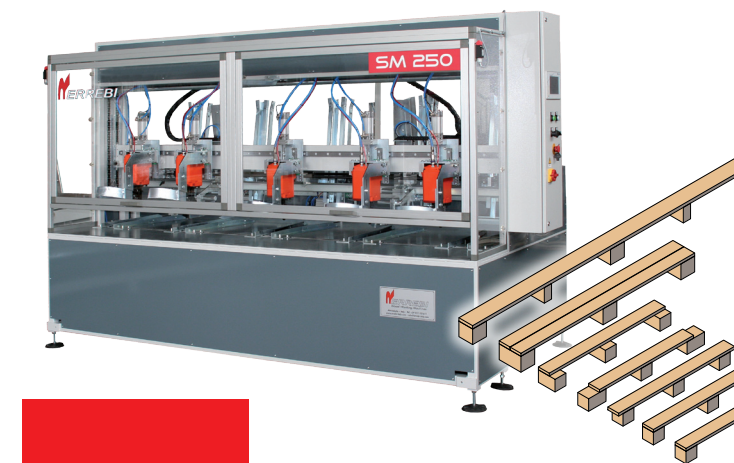

The **RAPID** machine executes different nailing, boring, counterboring or trimming programs in the same work cycle.

It is suitable for the production of a variety of different-sized wooden packaging models (cases, cages, crates, flatbeds, flanges, saddles, pallets, garden wood, fences etc.) on the same workday.

This machine is especially useful for those who make clinch processes.

SM

SM series

The **SM** nailing machine produces blocks or stringers. This machine is ideal when you need to produce several different models on the same working day. Possibility of producing both standard as well as winged and indented block stringers.

The high precision in aligning the blocks and boards facilitates use in subsequent automated assembly stages, even when the system requires strict tolerances.

As auxiliary modules available we offer an Inkjet marking module for **Fit OK marking** or other Inkjet marks.

STACKER

The **STACKER** allows you to stack the stringers up to a maximum height of 1,200 mm.

It improves the efficiency of the system, while preserving the flexibility, thanks to the ease and speed of adjustment.

...your products

Our machines are perfect for automating the production of a wide variety of wooden packaging items.

- Open crates
- Boxes
- Skids
- Cable drums
- Saddles
- 2 and 4 way pallets
- Full perimeter base pallets
- Non-standard pallets

... and more.
